Summary

Systems Analysis and Development student at Unifor. I built, on my own, two web systems that are in daily use at Raimundo Célio Rodrigues Municipal Hospital in Pacatuba, Brazil: SIGCH, for maintenance tickets, and Logis Atlas, for stock control. I handle the whole thing in both: requirements gathering, database, interface, authentication, deployment, bug fixes and user support. I work with React and PostgreSQL every day. At university I work with Java, unit testing and design patterns.

Technical skills

Front-end	`JavaScript` `React 19` `HTML5` `CSS3` `Tailwind CSS` `Vite`
Back-end and data	`PostgreSQL` `SQL` `Supabase` `REST APIs` `Edge Functions` `Java` `Spring Boot (studying)`
Security	`RLS` `Multi-tenant` `OWASP` `LGPD (Brazil's GDPR)`
Engineering	`OOP` `SOLID` `GRASP` `GoF patterns` `Data structures` `Unit testing`
Tools	`Git` `GitHub` `Vercel` `Linux` `Python`

Systems in production

SIGCH | Maintenance and support ticketing for a hospital

In production since Jul 2026

`React 19 · Vite · Tailwind CSS 4 · Supabase (PostgreSQL, Auth, Realtime) · Vercel · docs: github.com/GabrielPedrosa0/sigch-docs`

- Hospital teams open, assign and track maintenance and support tickets through the system. 74 tickets logged, 91% resolved, with an average resolution time of 8h11min.
- Four access roles enforced by PostgreSQL RLS policies, with data isolation between organizations. Each technician only sees tickets in their own category.
- Auto-refreshing TV dashboard and third-party dependency tracking with audit history.
- I ran an OWASP-based security audit. Patch v1.2.0 fixed access control flaws in the RLS policies and a cross-organization sign-up loophole. I also ran the LGPD compliance audit.
- Entered in the ISV 2026 Innovation Award, Operational Efficiency and Processes track.

Logis Atlas | Stock control for a hospital warehouse

In production

`React 19 · Vite · Tailwind CSS 4 · Supabase (PostgreSQL, Auth, Edge Functions) · Vercel · docs: github.com/GabrielPedrosa0/logis-atlas-docs`

- Warehouse stock split by unit and by department. 5,035 entries and 2,340 exits recorded in August 2026.
- Batch and expiry tracking with FEFO, cycle counting with item-by-item discrepancies and internal request approval. Being reworked: new visual identity, redesigned screens and a new security audit.

Experience

Full Stack Developer (self-employed) · Raimundo Célio Rodrigues Municipal Hospital — Jul 2026 – present

- I build and maintain SIGCH and Logis Atlas and support their users.

Administrative Assistant · Raimundo Célio Rodrigues Municipal Hospital — Jul 2026 – present

- Administrative routines and communication between clinical and administrative departments, handling confidential information.

Warehouse Assistant · Raimundo Célio Rodrigues Municipal Hospital — Feb 2025 – Jun 2026

- Spotted bottlenecks in the department's processes and built SIGCH and Logis Atlas, now part of the hospital's routine.
- Stock receiving and dispatch, and support for inventory closing.

Administrative and Warehouse Assistant (internship) · MS Serviços — Aug 2024 – Dec 2024

- Administrative routines and warehouse stock control.

Academic projects

- **Testing and Validation (Java):** white-box unit tests as a team, targeting 80% coverage or more.
- **Data Structures (Java):** AVL tree with SHA-1 hashing.
- **Data science (Python):** Olist dataset analysis with Streamlit, scikit-learn, statsmodels and Holt-Winters forecasting.

Education

Associate degree in Systems Analysis and Development — Expected 2028

Universidade de Fortaleza (Unifor)

Current courses: Systems Architecture Design, Systems Testing and Validation, Information Systems Security.

Languages

Portuguese: native · **English:** studying at Wizard, expected completion Jun 2027
